

RODIM Vortex-61 Back-Up Pad

Published: 09.08.2017

Latest update: 09.08.2017

SANDING

- **Application:** Universal Back-up Pad Ø150MM for electrical and pneumatic random orbital sanding-machines.
- **Plate:** Nylon6-Fiberglass.
- **Rubber:** EPDM+ER+SBR.
- **Adapter:** Nylon6-Fiberglass.
- **Bolt-fittings:** Zinc-M8 Black-5/16" bolts, more Festo fitting and thickness washers.

Remarks

- Vortex-61 holes exclusive vacuum
- very powerful dust vacuum without distortion of the surface.
- perfect balance on every sanding-machine type
- ideal hardness and precise surface adhesion for every application.
- top quality materials that offer a very long lasting of the back-up pad in perfect conditions.

Available in:

Article Number	Article description
45188669	RODIM Fittings for Universal Back-Up Pad
45187796	RODIM Vortex-61 Back-up Pad 150mm

Compatible with:

Article Number	Article description
45190472	RODIM Interface Vortex-61 150mm H 5mm
45187795	RODIM Interface Vortex-61 150mm H 10mm
	RODIM Premium Disc 150mm Vortex-61
	RODIM Standard Disc 150mm Vortex-61

Packing:

1 Back-Up Pad per Box. Including fitting kit and instruction manual.

RODIM Vortex-61 Back-Up Pad

SANDING

RODIM Vortex-61 Back-Up Pad 150mm has been studied to offer a very powerful dust vacuum without the distortion of the sanded surface that happens for most of the multi-holes vacuum systems in the market. This unique back-up pad offers perfect balance on every sanding-machine type and ideal hardness and precise surface adhesion for every application. It is built with top quality materials that offer a very long lasting of the back-up pad in perfect conditions.

Perfect hardness for every Application

Standard hardness is universal for any application.

Soft hardness is perfect for the application with sanding-machines with 2,5-3 mm orbit without the use of soft-interfaces.

Dust Suction

The RODIM Vortex-61 Back-Up Pad is a unique suction system studied for constant powerful suction on all disc surface and edges. It is fully compatible with 6-7-8-9-15 and 21 holes' suction systems for the 7 central standard holes. It offers the maximum dust-vacuum possible by keeping the sending surface intact and flat, with only 6% taken-off by the holes.

Velcron

Original Velcro[®] for a perfect grip on abrasive discs' velour along the use time. Better holes matching during the sanding action, for an always precise and well balanced suction.

Balance and Vibrations

The balance is perfect with any sanding-machine, and thanks to its low thickness profile, it warrants the minimum vibration level during the sending procedures.

Fitting Kit

RODIM Vortex-61 Back-Up Pad is supplied with a complete fittings kit. It includes 5/16 bolt fitting, which fits most of the pneumatic sanding-machines in the market. It even includes M8 bolt fitting, requested by some sanding-machines manufacturers such as Festo and Rupes.

In more, the specific Festo adapter included is updated to fit latest sanding machines.
