Packing:

1 Piece = 1 Pack consisting of 200 Roses

Application

machine and manual, correcting of small painting defects and removing of dust particles (finessing) in top coats and clear coats

Mineral

P1000 – P3000: aluminum oxide

Resin

P1000 – P3000: Resin over resin

Backing

P1000 – P3000: PET foil

RODIM Premium Roses

SANDING

- RODIM Premium Roses is a high precision grinding material mainly meant for correcting of small painting defects and removing of dust particles (finessing) in top coats and clear coats
- The product can be used in wet or dry sanding.
- The backing is a stable polyester foil. The binding is of resin over resin type with low VOC low energy curing resins. The grain coating is half open and has determined monolayer.
- Best performance is achieved with machine sanding with a water, tenside/water or with an isopropanol/water mix.
