RODIM[®] Multi-Hole Back-Up Pad 76mm

SANDING

RODIM Multi-Hole Back-Up Pad 76mm offers a powerful dust vacuum without the distortion of the sanded surface that can happen for other multi-holes vacuum systems in the market. This back-up pad offers perfect balance on every sanding-machine type and ideal hardness and precise surface adhesion for every application. It is built with top quality materials that offer a very long lasting of the back-up pad in perfect conditions.

Perfect Hardness for Every Application

- Standard hardness is universal for any application.
- Soft hardness is perfect for the application with sanding-machines with 2,5-3 mm orbit without the use of soft-interfaces

Balance and Vibrations

The balance is perfect with any sanding-machine, and thanks to its low thickness profile, it warrants the minimum vibration level during the sending procedures.

Fitting Kit

RODIM Multi-Hole Back-Up Pad 76mm is supplied with a complete fittings kit. It includes 5/16 bolt fitting, which fits most of the pneumatic sanding-machines in the market. It even includes M8 bolt fitting, requested by some sanding-machines manufacturers such as Festool and Rupes.
