### Backing

A paper laminated to a foam

### Product Cut

Pre-cut 125mm sheets

### Packing:

1 Piece = 1 Pack consisting of 1 Roll with 200 Pads

# RODIM Soft Roll

## SANDING

### Handling and Duration

An easy handling of the RODIM Soft Roll is achieved by a dispenser-box. The perforated sheets of the RODIM Soft Roll are for hand sanding of contours and irregular hard-to-reach body details. Suitable for both dry and wet sanding. The special foam backing provides a good handgrip and an even leveling pressure. By having an even pressure and a special stearate, the durability of the RODIM Soft Roll is long lasting on all materials.

### Anti-Clogging

The special stearate coating ensures that the RODIM Soft Roll has a constant cut and is highly resistant to clogging.

### Flexibility

The flexibility and the softness of the RODIM Standard Soft-Roll make this product ideal for the hand-sanding of painted surfaces and irregular, difficult-to-reach details.

### Aggressiveness

The aggressiveness is very good on all materials. This lets the operator work with little pressure, getting a better refinish and less clogging.

### Refinishing

RODIM Standard Soft-Roll offers a very fine refinish. The refinish is fine and very homogeneous in all grits.
